

Google Checkout allows you to accept credit card payments using a (free) Google account. In our experience, it is easier to use and more reliable than PayPal for a nearly identical functionality. Read more about Google Checkout [here](#).

Follow these steps to use Google Checkout on your store.

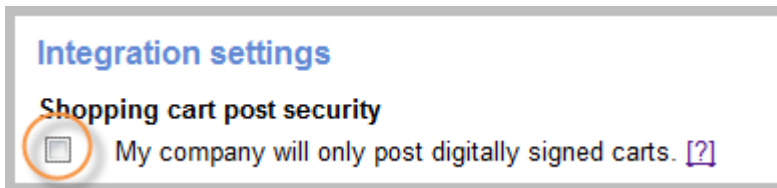

1. Sign up for a [Google Merchant account](#). It is free and easy.

Please Note: Google will make a small deposit in your bank account and you will need to verify the amount in order to complete your sign up. This will take a day or two.

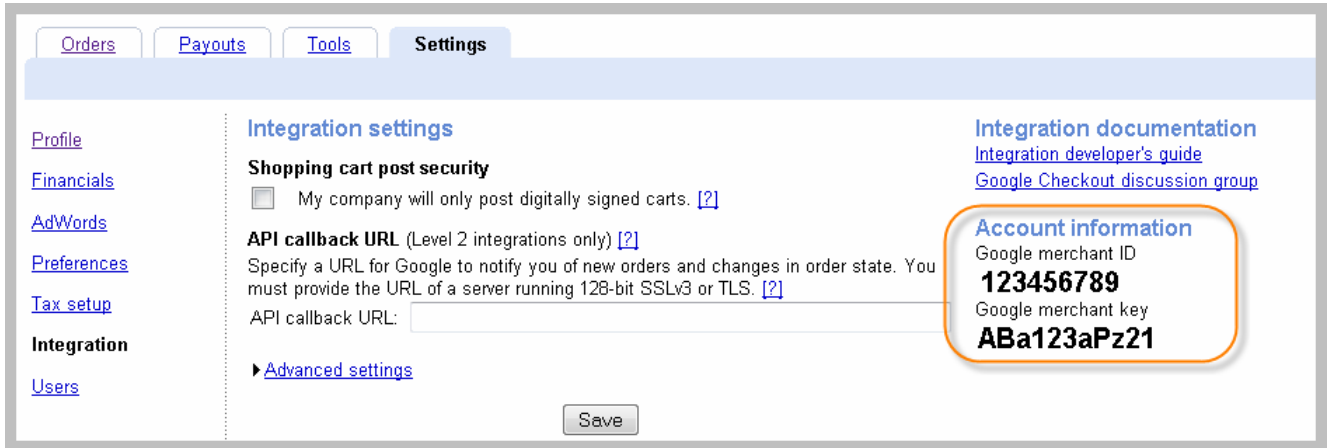

2. Login to your Google Checkout account and go to “My Sales”. Click on the “Settings” tab and then click on “Integration” on the left.

3. Make sure “My company will only post digitally signed carts.” is unchecked.

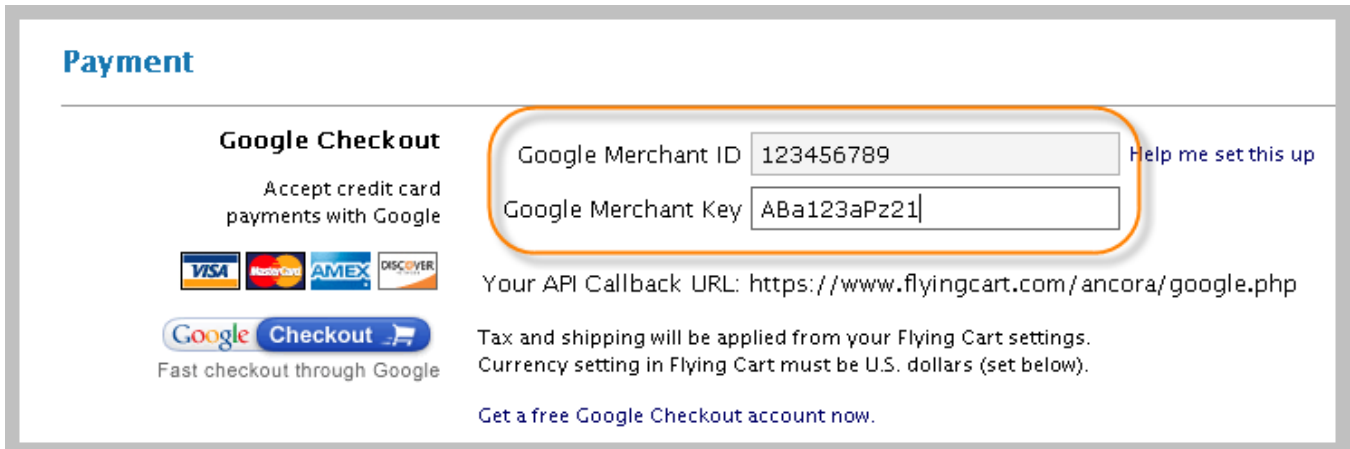

4. Locate your Google merchant ID and Google Merchant Key on the right side of this page.

The screenshot shows the 'Settings' tab in the Flying Cart interface. On the right side, there is a box titled 'Account information' which contains the following details:

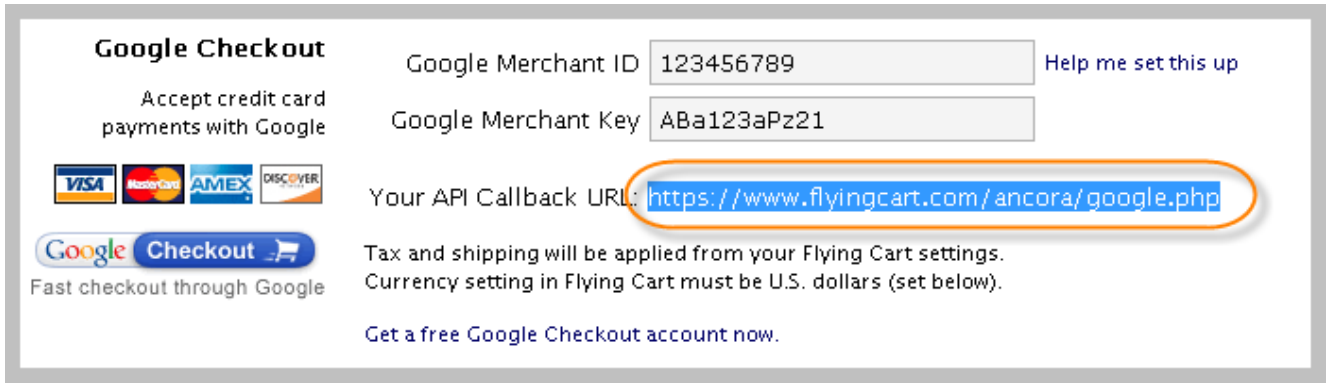

- Google merchant ID: **123456789**
- Google merchant key: **ABa123aPz21**

5. [Login](#) to your Flying Cart store headquarters (in a new browser window). Go to your “Store” -> “Settings” tab. Scroll down to the Payment section and enter in your Google Merchant ID and Google Merchant key that you got from Step #4.

The screenshot shows the 'Payment' section in the Flying Cart interface. Under the 'Google Checkout' heading, there are two input fields for the Google Merchant ID and Google Merchant Key, both of which are highlighted with an orange box. The values entered are 123456789 and ABa123aPz21. Below these fields, there is a link that says 'Help me set this up'. The API Callback URL is set to https://www.flyingcart.com/ancora/google.php. There are also logos for VISA, MasterCard, AMEX, and DISCOVER, and a 'Google Checkout' logo with the text 'Fast checkout through Google'.

6. Highlight your API Callback URL from the Google Checkout section and go to Edit > Copy in your browser to copy it. Scroll down the page and click “Update Settings” at the bottom.

Google Checkout
Accept credit card payments with Google

Google Merchant ID: 123456789 [Help me set this up](#)

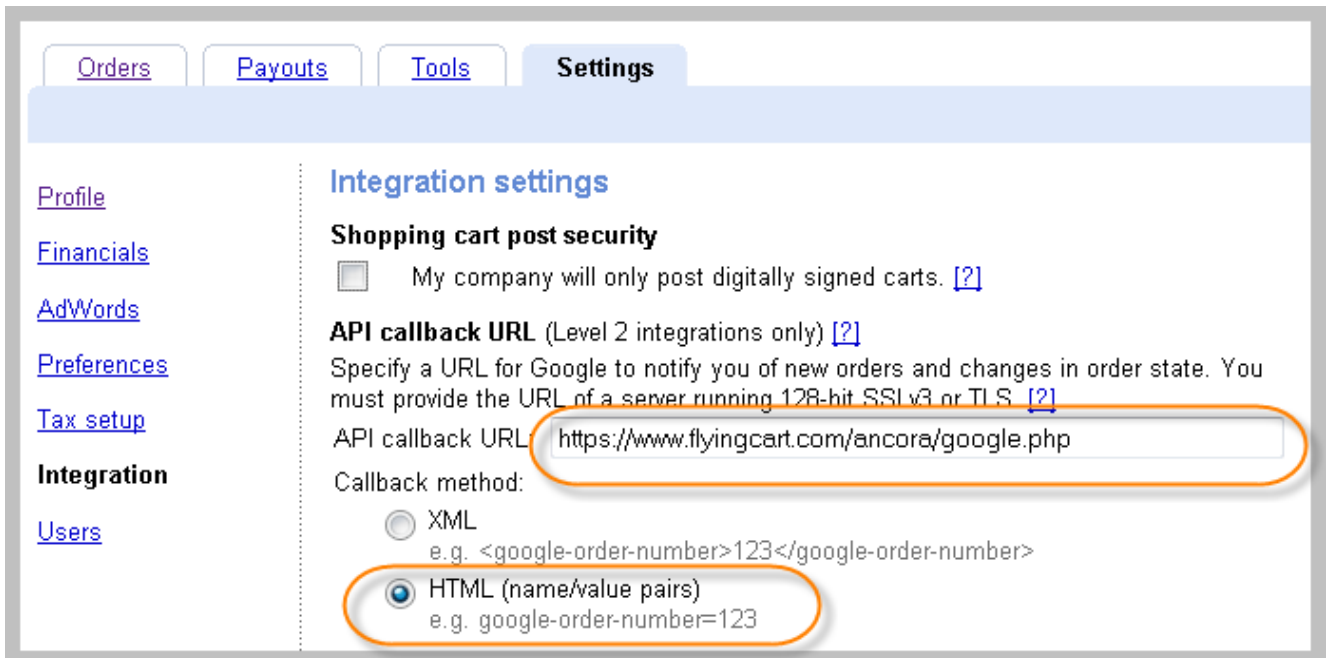

Google Merchant Key: ABa123aPz21

Your API Callback URL: <https://www.flyingcart.com/ancora/google.php>

Tax and shipping will be applied from your Flying Cart settings. Currency setting in Flying Cart must be U.S. dollars (set below).

[Get a free Google Checkout account now.](#)

7. Go back to the window with your Google Settings and paste the API Callback URL into the field on that page. Select “HTML (name/value pairs)” as the callback method. Hit “Save”.

Settings

Integration settings

Shopping cart post security
 My company will only post digitally signed carts. [\[?\]](#)

API callback URL (Level 2 integrations only) [\[?\]](#)
Specify a URL for Google to notify you of new orders and changes in order state. You must provide the URL of a server running 128-bit SSLv3 or TLS. [\[?\]](#)

API callback URL: <https://www.flyingcart.com/ancora/google.php>

Callback method:

- XML
e.g. <google-order-number>123</google-order-number>
- HTML (name/value pairs)**
e.g. google-order-number=123

8. Go to your store, put something in your cart and notice that Google Checkout is now an option. Enjoy!
